EXPERIMENT:4

UX DESIGN LAB · EXPERIMENT 04

REEL TOGETHER

Design lifecycle · From a shared problem to a testable movie-night experience

CORE PROMISE

Book together, wherever you are.

THE USER PROBLEM

Friends in different cities struggle to coordinate a shared cinema outing.
Separate booking apps, time-zone differences and scattered group chats can make the plan fall apart.

01 → 02 → 03 → 04 → 05

01 DISCOVERY

Understand people

Explore how friends plan movie nights across cities.

KEY QUESTIONS

- How do friends choose a film and time?
- Where do plans break down?
- What makes a shared experience feel connected?

OUTPUT

User needs, pain points and planning context.

02 DEFINE

Frame the problem

Turn research insights into a clear design challenge.

HOW MIGHT WE...

...help friends in different cities find aligned showtimes, book locally, and feel like they are attending together?

OUTPUT

Problem statement and success criteria.

03 DESIGN

Shape the solution

Organise the journey around planning and memories.

CORE EXPERIENCE

- Watch Party: movie, friends, city showtimes and lobby.
- Cine-Passport: film log, theaters, stats and badges.

OUTPUT

Screen structure, visual system and key interactions.

04 PROTOTYPE

Make it tangible

Build a clickable flow to demonstrate the concept.

PROTOTYPE FLOW

Choose film → create party → review aligned showtimes → book ticket → open lobby → save memory to Passport.

OUTPUT

Clickable Figma prototype for the main user journey.

05 USABILITY TEST

Learn and improve

Ask users to complete tasks and observe where they struggle.

TEST TASKS

- Find a time that aligns with friends in other cities.
- Find the lobby and locate the movie in Cine-Passport.

OUTPUT

Usability notes, priorities and iteration opportunities.

DESIGN PRINCIPLE

Keep the shared experience at the centre — not just the ticket.
Reel Together connects local bookings, aligned showtimes, a pre-show lobby and a lasting movie memory.
