EXPERIMENT 7 — PROTOTYPE ITERATIONS 1 & 2

REEL TOGETHER • Refine the experience of watching across cities

DESIGN REVIEW → REFINEMENT

ITERATION 1 — INITIAL PROTOTYPE

Core concept: Watch Party + Cine-Passport

WHAT NEEDS CLARITY?

- Time zone / local time not explicit
- Showtime match status is easy to miss
- Primary action lacks strong hierarchy
- Invite and lobby actions compete
- Passport access feels secondary

DESIGN REVIEW FOCUS

Can a user quickly tell:

• who is joining? • when to meet?

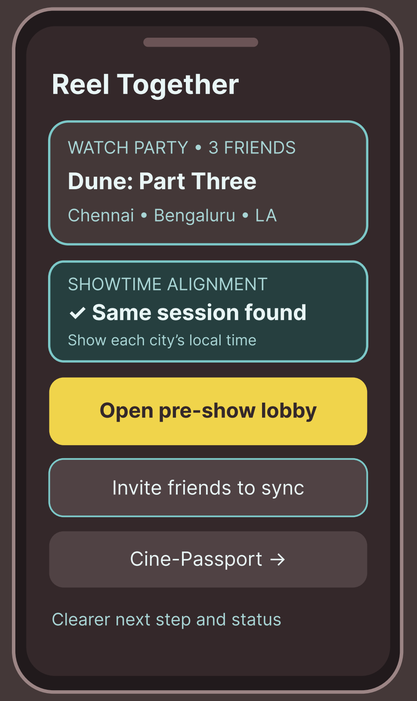

These are review questions, not user-test results.

REFINE

based on design review

ITERATION 2 — REFINED PROTOTYPE

Clearer status, action hierarchy, and navigation

WHAT CHANGED?

- Show alignment status prominently
- Display local times for each city
- One clear primary CTA
- Invite action is secondary
- Passport remains easy to find

EXPECTED BENEFIT

Less guesswork before booking and a more obvious next action.

Proposed improvement; validate with users.

ITERATION SUMMARY

Keep the core idea; make the shared cinema plan easier to understand and act on.

1. CLARITY

Label city, local time, date, and theatre.
Show whether the group's sessions align.
Offer another time if no match is found.

2. ACTION HIERARCHY

Make the next step visually dominant.
Keep invite / edit actions secondary.
Confirm booking and show the e-ticket.

3. VALIDATION PLAN

Ask users to find a matching session.
Check if they can locate the lobby.
Observe confusion; revise from evidence.

NOTE: Iteration 2 is a proposed design refinement, not a claim that formal user testing has already happened.
